

Bird-Coil®

Patent 4,841,914

Where to Use	Long, exposed ledges, parapets, signs, beams, pipes, etc.
Target Bird	Pigeon or larger
Bird Pressure	Light–Medium (see pg. 6 for details)
Material	Stainless steel
Installation Level	Easy

Almost Invisible

When seen from a distance of twenty feet or more Bird Coil virtually disappears, and from fifty feet it's invisible.

How It Works

Based on the simple premise that birds like a solid landing platform, Bird Coil de-stabilizes the ledge, causing unwanted pigeons and gulls to take their mess elsewhere.

Totally Humane

Bird Coil's smooth curves are completely harmless to both birds and unsuspecting workers needing access to ledges.

How to Install Bird Coil

Bird Coil can be attached to any substrate using adhesive and our special coil clips. Install one clip per foot with Bird Barrier Bond or the appropriate screw and clip it in place. It's fast, easy and very secure.

Four and five inch Bird Coils (with spaces between and overhangs at the edge) can effectively protect any width ledge.
