

The Mosquito Slayer

Series 4 (S4)

Product Overview

The Mosquito Slayer Series 4 is an upgrade of the Mosquito Slayer Series 3 trap and offers an enhanced technology package for the trapping of female mosquitoes – the ones that bite and potentially spread disease.

The Mosquito Slayer traps have been the front runners in packaging proven technologies that capture large numbers of female mosquitoes as well as other biting flies such as biting midge and black fly. The Series 4 continues in that tradition.

The Series 4 comes in two models – the Standard and the Satellite. The Standard has its own transformer while the Satellite requires power from a Standard unit or from solar. Various numbers of Satellites can be linked to a Standard unit to provide protective barriers against mosquitoes.

The Series 4 has a suite of on-board features such as heat, moisture, spectrum light, UV LEDs, various colored LEDs, trap casing in contrasting dark-light colors, sound, movement and safe 12 volt operation. For convenience the Mosquito Slayer S4 can run off AC (mains power) or solar/battery (DC power).

The trap is designed to accommodate a choice of approved lures in powder, liquid, gel and cartridge form. Lures can include CO₂, octenol and lactic acid. This allows the trap to be configured to target specific species.

The Standard model can easily be upgraded to an efficient and economical gas trap (carbon dioxide/CO₂) by fitting a proprietary gas regular hose that extends longevity of any size bottle of CO₂. Accessories such as a tray auxiliary tank and solar power kit will be available.

The Series 4 is an ideal biting fly trap for residential and smaller serviced commercial areas.
