

Did you know?

At least 2 people die every minute in the world from mosquito-borne diseases.

With approximately 150,000 deaths annually, dengue fever caused by mosquitoes is now the 10th leading cause of death worldwide.

Ross River disease is the most commonly transmitted mosquito-borne viral disease to humans in Australia. Disease notifications in Australia average about 4,800 per year and are increasing dramatically.

The painful bites of midge and mosquitoes can ruin entertaining and outdoor activities throughout Australia. Skin irritations and infections can also be an issue for many Australians.

Trapping is the ideal way to control mosquitoes and biting midge in confined areas in both domestic and commercial situations – without the need for insecticides.
